

Creating healthy spaces

Your outdoor in style

VENTILATION

SUNPROTECTION

OUTDOOR

Ideal outdoor climate, day and night with Renson®

Regardless of the weather, we like to spend as much time as possible outdoors. The garden is no longer separate from the house, both form one whole. This makes us also yearn for more time, comfort and optimal joy of living while being outdoors. Being outside becomes living outside!

With many years of experience in sun protection screens and ventilation, RENSON® is taking the outdoor space to a higher level. Due to innovative products designed correctly, it is now possible to enjoy your terrace and garden in early spring and late autumn.

The pleasure of comfortable
outdoor living

The ultimate combination of quality and design

When developing your terrace covering **Lagune®**, **Camargue®** and **Algarve®** RENSON® paid a lot of attention to quality of the whole system, the easy and flexible assembly and also to the overall solidity. The fixings are concealed and the electrical cables are hidden inside the structure. Even the ground support can be concealed.

You select a terrace covering to suit your own wishes. The structure can easily be combined with the most diverse range of styles — from traditional to modern or contemporary. This allows it to become an elegant and timeless extension of your home.

Lagune® with a sloped roof is always built onto a façade. **Camargue®** and **Algarve®** both have a bladed roof at an angle of 0°. They can be mounted in a variety of ways: free-standing with 4 columns, façade mounted with 2 columns or integrated into an existing opening without vertical columns.

RENSON® is also thinking of sustainability. The materials used are weather-resistant and capable of withstanding both extreme heat and extreme cold. Aluminium, screen fabrics, glass or wooden blades — all of them are strong and maintenance-friendly materials.

LAGUNE®

If you want to live outside, you have to take the chances of nature into account. If the sun gets sultry, if it starts to rain or if the wind begins to blow harder we have to move indoors. Or don't we? A terrace covering works wonders. Available in all colours to match the style of the home. RENSON® has a complete range of terrace coverings with a stylish aluminium structure — something for everyone: Lagune®, Camargue® or Algarve®.

No more problems with sun or rain. The Lagune® puts an integrated windproof, waterproof yet translucent sun protection screen over your head. The rain disappears along drainage gutters into a drain pipe in the vertical columns, even if the sun protection screen is not completely closed. With the Camargue® and Algarve®, equipped with adjustable

aluminium blades, you decide how much light shines onto your terrace. A closed roof is waterproof and the water is drained off via integrated gutters. They protect your furniture, ensure you always have a dry terrace, even if the blades open up after a rain shower.

Enjoy every moment of the day. These comfortable outdoor rooms are a guarantee for mood and appearance, as well as warmth and cosiness. When it gets dark late in the evening, you simply switch on the integrated lighting and you can continue to enjoy your terrace when it gets a bit colder. One or more heating elements— depending on the size of the terrace covering — can be provided. You can even enjoy the music you love under your terrace covering thanks to the integrated flat panel speakers.

LAGUNE®

Can be closed to block out rain & wind

The **Lagune**[®] is a terrace covering with a waterproof, translucent screen fabric. The Fixscreen[®] technology, in combination with optimal screen tightness, ensures that rainwater is drained off via hidden channels. Even if the sun protection screen is not fully unrolled, the water is drained away via this integrated water-drainage system.

Both the **Algarve**[®] & **Camargue**[®] terrace coverings have rotating blades. These patented blades are designed in such a way that the water is drained off to the side if the blades open up after a rain shower.

The Lagune[®] can drain an amount of water equivalent to a rain shower with an intensity of 180 mm/hr that lasts up to 2 minutes. These kinds of rain showers occur on average once every 15 years in Belgium. (Source: Belgian rain statistics: standard NBN B 52-011)

The Algarve[®] can drain an amount of water equivalent to a rain shower with an intensity of between 144 mm/hr and 180 mm/hr that lasts up to 2 minutes. These kinds of rain showers occur on average once every 10 years in Belgium. (Source: Belgian rain statistics: standard NBN B 52-011)

The Camargue[®] can drain an amount of water equivalent to a rain shower with an intensity of 180 mm/hr that lasts up to 2 minutes. These kinds of rain showers occur on average once every 15 years in Belgium. (Source: Belgian rain statistics: standard NBN B 52-011)

Enjoy every moment of the day.

When it gets dark late in the evening, you simply switch on the integrated **lighting**. You can choose between cold or warm light to create the desired mood and feeling.

Even when it gets a bit colder you can continue to enjoy your terrace. **Heating elements** can be provided to make this possible. The radiated heat ensures an even distribution of warmth throughout the space with a minimum of heat loss.

Thanks to the integrated flat panel speakers, you can even enjoy your favourite **music** on your terrace.

Personalise

Both *Camargue*® as well as *Lagune*® can be equipped with different elements on the front and/or sides. Endless personalisation options are possible by adding side elements.

When lowered, **motorised windtight screens** create a protective cocoon. Thanks to the partially transparent screens and optional crystal windows, the view of the garden remains. What's more, you can choose from some 50 colours. All colour combinations are possible and can be combined perfectly with other materials such as the garden furniture. In the open position, the **screens** are **invisible**, and the **motors** are completely **concealed** in the structure.

You can also opt for **sliding glass doors**. And in combination with windtight screens, the benefits of the sun protection system are undiminished.

Elegant **sliding panels with windtight screens or wooden blades** are another option. Wood is back again and is easy to combine with other materials.

Pivot side with integrated Fixscreen®*

Span side with integrated Fixscreen®*

Combination of several integrated Fixscreens®

Span side with Loggiawood®*

Translucent blades

For the Camargue® and Algarve® terrace coverings with horizontal aluminium blades, RENSON® is introducing Lineo® Luce, translucent blades. When you equip part of your terrace covering with translucent blades, you create more openness. When you build it onto your home, you let more light in.

available Summer 2014

Loggia® Sliding Panels

With the vertical sun protection sliding panels we can influence the way sunlight penetrates your terrace covering (dynamic sun protection). The sliding sun protection panels are made of frames with:

Privacy

with rotating wooden or aluminium blades

- 1 use of aluminium blades

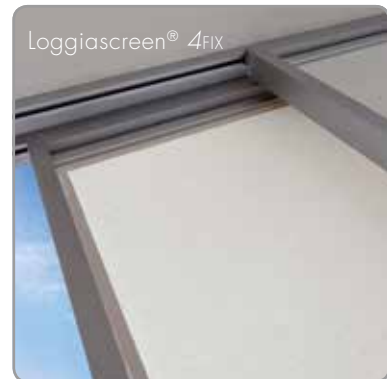

Loggialu®

- 2 use of wooden blades: fixed

- 3 use of sun protection screen

All of these types have specific characteristics with respect to sun protection and transparency. Depending on the functionality and aesthetics you want, you can make the right choice on the basis of those characteristics.

Colour selection aluminium

The visible aluminium parts are available in all of the standard RAL colours.

A selection* of the most common colours:

* This table is only to be used as a reference. Colours may differ from the actual RAL colour.

Colour range for glass fibre fabric

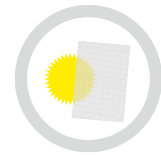

A screen fabric of your choice

There are different kinds of screen fabric. Every fabric has specific characteristics and colour possibilities. The best choice for a translucent screen fabric in a windproof sun protection screen is a glass fibre fabric, which retains the transparency. Glass fibre fabric also scores best in terms of simplicity and form retention and is also very resistant to dampness and heat. Glass fibre fabric comes with a choice of over 50 different colours. The **Architects' selection** is a range of colours that are very popular in the current interior design and architecture trends.

This sun protection screen is also available with crystal windows, for a crystal-clear outside view.

Adjacent to this text you can see a small selection from our glass fibre fabric range. The RENSON® Ambassadors would be pleased to assist you in selecting your screen type and colour.

Rensonscreen Waterproof

Your Lagune® has an innovative, waterproof, sunproof and translucent screen in the roof.

The screen fabric is coated on 1 side with a waterproof coating that is UV resistant.

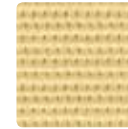

The screen fabric is available in 10 colours, 3 of which are exclusive RENSON® colours.*

Automation

You can operate your terrace covering easily by means of Somfy® automation.

You can operate the roof and/or the screens of your terrace covering with a remote control. Depending on the desired use and the number of screens, you can choose from several different remote controls.

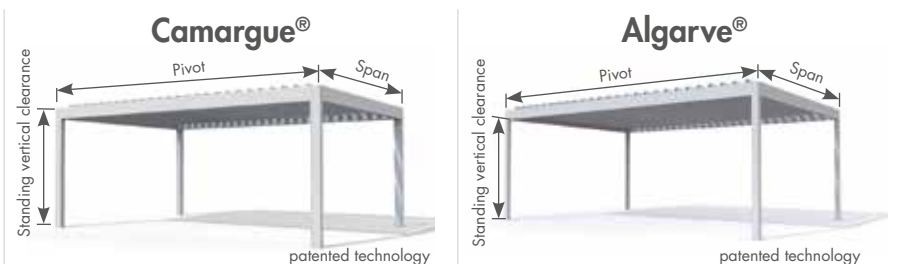

Thanks to Tahoma®, the new Somfy® user interface, your terrace covering can be operated from your smartphone, tablet or computer.

To give you optimal protection, we advise placing a rain and/or wind sensor.

Ambassador/ Official Installer

■ Where can you go to find RENSON® products as an end user?

To ensure high-quality expertise and professional installation of Renson products, we have set up a network of well-trained Ambassadors and Installers.

RENSON® Ambassadors display our products in their showrooms, offer professional advice and can assist you in selecting and configuring your product of choice.

RENSON® Official Installers ensure that the product you have purchased is installed in a professional and proper manner by their own installation team. In addition, they also guarantee professional after-sales service.

1 dealership can be certified as both an Ambassador and an Official Installer in order to ensure total support in both sales and installation.

■ What are the benefits of working with a RENSON® Ambassador / Official Installer?

- He is perfectly trained and has the required expertise with regard to our products
- He provides you with tailor-made professional advice
- He can prepare a correct offer
- He guarantees perfect after-sales services and is always available to assist you

You can recognise our RENSON® Ambassadors and Official Installers by the official labels shown on the right.

Worldwide installation !

RENSON®: your partner in ventilation and sun protection

RENSON®, headquartered in Waregem (Belgium), is the European trendsetter in natural ventilation and outdoor sun protection.

- ***Creating healthy spaces***

With experience dating back to 1909, we develop energy-efficient total solutions that provide healthy and comfortable indoor environments. Our remarkable head office, built according to the Healthy Building Concept, perfectly reflects our corporate mission.

- ***No speed limit on innovation***

A multidisciplinary team of more than 50 R&D employees continuously optimises our products and develops innovative total concepts.

- ***Strong in communication***

The contact with the client is the prime consideration. Our own exterior sales team, with more than 70 members of staff worldwide and a strong international distribution network, is available to advise you on-site. EXIT 5 in Waregem also gives you the opportunity of personally experiencing our products and provides continuous training to our installers.

- ***A reliable partner in business***

Thanks to our environmentally friendly and modern production facilities (including automatic powder-coating installation, anodisation unit, PVC injection moulding, mould-making), with a total surface area of 95,000 m², we can always guarantee optimal quality and service to our customers.

EXIT5

RENSON® headquarters elegant building designed by architect Jo Crepain, our company's calling card for years – was extended with EXIT5.

The space underneath the building was enclosed with an imposing glass façade. Behind that façade, a new 'Customer Centre' was created with reception rooms for clients, meeting rooms and an auditorium where large groups of more than 250 people can attend presentations. This auditorium can also be divided into three separate spaces for smaller groups.

The project's eye-catcher is the new 1,250 m² showroom where both professional clients and customers are welcome. In addition to a display room for the various innovative RENSON® solutions and concepts, this space will also become a centre of expertise, where customers can find answers to questions about ventilation, sun protection, Nightcooling, acoustics, etc.
