

markilux 1700 stretch

Striking design, proven technology – the elegant open awning
The perfect solution for narrow patios, niches and balconies

side view with awning retracted, face fixture

side view with awning retracted, top fixture

pitch adjustment from 5° to 25° (to the horizontal) via the fixture brackets

during extension

tiered folding arm fitted to the sturdy secondary section of torque bar

markilux 1700 stretch optionally available with system coverboard, as well as the markilux flexlight light rope (please refer to the section "Optional Accessories")

markilux bionic tendon made from high-tech fibres for ideal power transference – as standard

greater projection than width: the perfect solution for narrow patios, niches and balconies; the tiered arms fold away above one another during retraction

Design Features

the classic shape of an open patio awning with a stylish new look

the transition from torque bar to roller tube is curved and homogeneous

side caps available in polished chrome offer an optional designer touch

Technical Specification

thanks to this innovative technical solution – tiered arms – large projections can still be achieved in narrow awnings

attractive front profile made of extruded aluminium with integrated gutter and water drainage spouts

sturdy, round steel torque bar, 50 mm Ø, to prevent twist and deflection

the 85 mm roller tube ensures the highest rigidity and the best possible cover winding characteristics even at the largest widths

unique arm technology with power transference by way of the highly tear-resistant bionic tendon made of high-tech fibres, achieving at least 50,000 cycles in tests by the Fraunhofer Institute

Optional Accessories

hard-wired motor operation (optionally with automatic weather controls) for straightforward and easy operation

radio-controlled motor with handheld remote control for ease of use

in the case of manual operation, ease of use is ensured with the spring-assisted gearbox

available with the transparent system coverboard

awning available in non-standard RAL colours

Additional information

The width of the awning cover is always **less** than that of the awning.

Definition of operation side:

The operation side is given looking at the awning from the outside (right or left).

Pitch adjustment range:

from 5° to 25° (to the horizontal).

Definition of projection:

please refer to the section “Technical Information”.

In the case of manual operation approximately **16 winding handle revolutions can be assumed per metre of awning projection.**

It takes approximately **12 seconds per metre** to extend a **motor-driven awning.**

This model is only available as a single unit.

By using the additional flat fixture plate, the shear force is reduced in comparison with conventional eaves fixture.

M = awning width

H = projection

Md = torque value for the bracket in the immediate vicinity of the arm

HT = no. of brackets

FS = shear force

BM = no. of fixing points

with eaves fixture bracket 150 mm

with eaves fixture bracket 270 mm

dimensions in mm

Installation using the adjustable eaves fixture bracket

Pull-out force [N=Newton] per upper fixing point according to EN 13561, wind resistance class 2

The pull-out force refers to the measurement from the front to the rear fixture points of **140 mm**. Washers conforming to DIN 9021 must be used.

- M = awning width
- H = projection
- FB = pull-out force per fixing point
- HT | BHT = bracket quantity | width
- BM = no. of fixing points

ATB = no. of torque bar fixing points for the system coverboard

BM = no. of fixing points, face fixture

M = awning width

Bracket fixture range for awnings with 2 folding arms

dimensions in cm

If the brackets cannot be positioned in accordance with this table, make sure the actual measurements are noted on the order form!

AS = operation side

M = awning width

MH = bracket centre
