

markilux 990

**the compact markilux cassette awning –
slender, practical, functional**

side view with awning retracted, face fixture

side view at a pitch of 35°

side view with awning retracted, top fixture

folding arm with round, steel-link chain

markilux 990 with wall sealing profile (optional)

the pitch adjustment range goes from 5° to 35° in the case of face fixture and 5° to 70° in the case of top and eaves fixture (both measured to the horizontal)

optional subject to a surcharge: markilux bionic tendon made of high-tech fibres for ideal power transference

side view during extension: markilux 990 Lounge in the combination anthracite metallic with end caps in polished chrome

Design Features

the compact markilux cassette awning – slender, practical, functional

appealing overall appearance thanks to the torque bar-free construction and especially compact cassette, 125 mm in height

the special cassette shape surrounds the roller tube even when the awning is extended so lending an overall harmonious appearance

created by renowned designers

Technical Specification

when the awning is closed the folding arms are protected behind the front profile

front profile with integrated gutter and hidden water drainage spouts

folding arms with perfected power transference by means of a round, steel-link chain

the 85 mm roller tube ensures the highest stiffness and the best possible cover winding characteristics even at the largest widths

folding arms with drop-forged, aluminium joint components and Teflon-coated bronze bushes, which provide superior robustness and durability

Optional Accessories

radio-controlled motor with radio remote control for ease of use

hard-wired motor operation (optionally with automatic weather controls) for straightforward and easy operation

wall sealing profile to cover the gap between awning and wall

in the case of manual operation ease of use is ensured with the spring-assisted gearbox

awning available in non-standard RAL colours

available with a valance

Additional information

The width of the awning cover is always **less** than that of the awning.

Pitch adjustment range: from 5° to 35° in the case of face fixture and 5° to 70° in the case of top and eaves fixture (both measured to the horizontal).

Definition of projection:

Please consult the section “Technical Information”.

In the case of manual operation approximately **16 winding handle revolutions can be assumed per metre of awning projection.**

It takes approximately **12 seconds per metre** to extend the awning in the case of **motor-driven units.**

This model is only available as a single unit.

A radio-controlled motor in io technology is available (see “Optional Accessories”).

HT	2						2					
BM	8						8					

The shear force is calculated on the basis of 2 fixing points per bracket, because – depending on the roof pitch – it cannot be guaranteed that 4 fixing points per bracket can be used.

- M = awning width
- H = projection
- Md = torque value for the bracket in the immediate vicinity of the arm
- HT = no. of brackets
- FS = shear force
- BM = no. of fixing points

At an awning pitch of more than 46 degrees to the horizontal, it is necessary in the case of manual operation, which also includes awnings fitted with a motor with manual override, to have an accessible area at least 60 cm deep behind the awning so the awning can be operated manually.

dimensions in mm

Eaves fixture with additional spreader / backing plate

Torque [Nm = Newton metres] for the fixture bracket in the immediate vicinity of the arm, shear force [N = Newton] per fixing point according to EN 13561, wind resistance class 2

H [cm]	Torque M [cm]						Shear force M [cm]					
	250	300	350	400	450	500	250	300	350	400	450	500
	FB [N]						FB [N]					
150	108	124	141	158	175	192	663	772	881	990	1100	1209
200	175	201	227	254	280	306	999	1155	1312	1468	1625	1781
250	—	285	323	360	398	436	—	1575	1789	2002	2216	2430
300	—	—	435	486	537	588	—	—	2351	2631	2912	3192
HT	2						2					
BM	4						4					

By using the additional spreader / backing plate, the shear force is reduced in comparison with conventional eaves fixture.

- M = awning width
- H = projection
- Md = torque value for the bracket in the immediate vicinity of the arm
- HT = no. of brackets
- FS = shear force
- BM = no. of fixing points

At an awning pitch of more than 46 degrees to the horizontal, it is necessary in the case of manual operation, which also includes awnings fitted with a motor with manual override, to have an accessible area at least 60 cm deep behind the awning so the awning can be operated manually.
